

Mock Drill of Fire Safety Measures

A mock drill was carried out on 6th November 2024 in Government College of Dentistry. Measures to control fire were demonstrated to the staff and employees. Two types of equipments were used one had a powder (Aluminium sulphate) and nitrogen and another has carbon dioxide. These extinguish the fire but water has to be used to get the final result. The staff and employees also used the equipments and tried to extinguish the lighted fire. It was very informative and helpful as a fire safety measure.
